

“Extending Shelf Life”

## iPIMM™ Facility Management System

The iPIMM™ Facility Management System provides our customers with a customized quality management solution for cold storage facilities. The system provides a user-friendly interface to enhance operational efficiencies for managing temperature, energy and quality control 24x7. iPIMM™ FMS provides an all in-one solution for centralized management of zones, thresholds, inspection criteria and corrective action procedures for each cold storage facility.

Each facility receives a “Quality Grade” that can be shared with customers to verify proper cold chain management process and procedures.

iPIMM™ FMS has a built in Quality Control “Audit System” that simplifies data collection, scoring and reporting for each cold storage facility. The system operates on both MS Windows and Apple iOS platforms.

The Apple iPad mini is the perfect mobile platform for the warehouse manager – size, shape, design, durability, reliability and functionality.
